PERSONAL PROJECTS

MARVALFIT [See on Github](#)

The project comprises two distinct applications designed to facilitate the workflow between a personal trainer and their clientele. The client-oriented application empowers users to meticulously record their personal data and access their prescribed workout routines. In contrast, the trainer-centric application serves the dual purpose of overseeing users on a global scale as well as catering to their individual needs. Additionally, this platform boasts an integrated messaging feature that facilitates the exchange of text messages, audio communications, and image sharing.

FREE COMIC [See on Github](#)

The desktop application possesses the capability to systematically traverse the various web pages of a given website with the specific objective of retrieving all the images associated with the selected comic book. Subsequently, it assembles these images into a cohesive compilation and proceeds to convert them into a PDF format characterized by high quality and resolution.
